

Listing of Claims:

1. – 23. (Canceled)

24. (Currently amended) A method for producing a feed containing heat-stabilized egg antibodies, the method comprising the steps of:

mixing an egg white, an egg yolk and at least one saccharide selected from a monosaccharide, a disaccharide, a polysaccharide, an alkylated monosaccharide, an alkylated disaccharide, an alkylated polysaccharide, a monosaccharide alcohol, or an alkylated monosaccharide alcohol to form an egg liquid suspension, said egg yolk containing an egg antibody produced in response to antigen inoculation; and

spray drying the egg liquid suspension to form an egg powder; and

processing the egg powder to provide a feed containing heat-stabilized egg antibodies, said processing step including exposing the egg powder to an antigen-binding-activity-destroying temperature of at least 70°C;

wherein the heat-stabilized egg ~~antibody~~ antibodies in the feed produced by said method loses less of its antigen-binding activity in comparison to an egg yolk antibody retaining at least 20% of its antigen-binding activity after being exposed to said antigen-binding-activity-destroying temperature.

25. (Previously presented) The method of claim 24, wherein the saccharide compound is selected from a monosaccharide of 5 or 6 carbons, a disaccharide made of monosaccharide residues of 5 or 6 carbons, and a polysaccharide made of monosaccharide residues of 5 or 6 carbons.

26. (Previously presented) The method of claim 25, wherein the polysaccharide contains linear, unbranched chains.

27. (Previously presented) The method of claim 24, wherein the saccharide compound is selected from an alkylated monosaccharide of 5 or 6 carbons, an alkylated disaccharide made of alkylated monosaccharide residues of 5 or 6 carbons, and a polysaccharide made of alkylated monosaccharide residues of 5 or 6 carbons.

28. The method of claim 24, wherein the monosaccharide alcohol has 5 or 6 carbons.

29. – 31. (Canceled)

32. (Previously presented) The method of claim 24, wherein the feed is selected from a human food product, a non-human feed product, a human dietary or nutritional supplement, a non-human animal dietary nutritional supplement, a pharmaceutical product, and a cosmetic product.

33. (Previously presented) The method of claim 32, wherein the product is an animal feed product.

34. (Previously presented) The method of claim 33, wherein the animal feed product is a feed pellet.

35. (Previously presented) A composition comprising a feed obtained by the method of claim 24.
